

# CAN YOU COMMUNICATE TOMORROW'S RISK TODAY?

***"Active Risk Manager promotes both the understanding and communication of risk by getting the right information to the right people at the right time."***

By combining international standards of risk management across all market sectors with the experience of global organisations, ARM (Active Risk Manager) delivers the first complete enterprise solution. ARM will enhance a risk management culture across projects and day to day operations, in compliance with corporate governance and industry regulations to an enterprise or consortium level.

## Core value statements

- Provides more effective decision making
- Reduces mitigation and insurance cost
- Enables lower level of residual risk across the business with the communication of risk targets
- ARM cost justifies purely on its secure central repository of all knowledge around threats and opportunities to the business

## Core benefits of introducing ARM

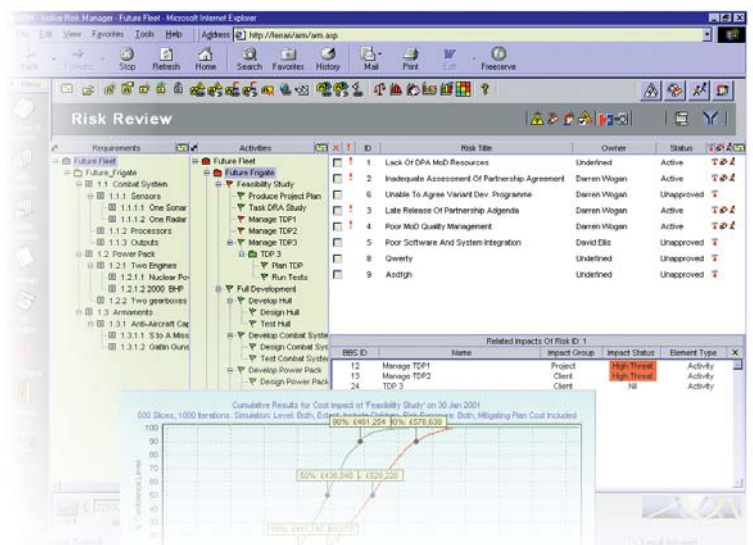

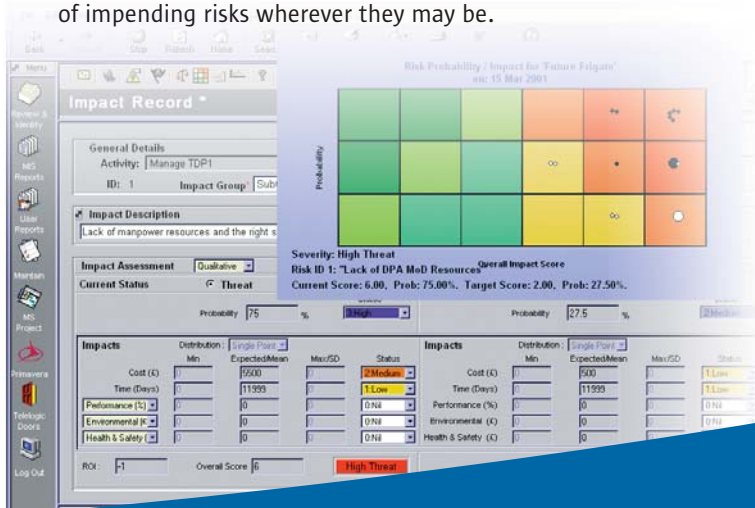

Provides organisations with the power to gain competitive advantage in large tenders or ongoing management of operations.

Reduces the risk management learning curve through the ability to configure both qualitative and quantitative views.

Real-time risk analysis and management information to assist the decision making process and the proactive management of risk.

Enables senior management to prioritise their requirements with user defined filtering to focus on key assets, activities, risks, plans and actions.

Proactive alert mechanism warning individuals or user groups of impending risks wherever they may be.

Active Risk Manager with its component based approach has been designed with the help of leading organisations from multiple industry sectors, public and private. As a result ARM delivers a comprehensive portal to identifying, assessing and managing risk through integration with requirements analysis and planning tools.

## Enhancing the risk culture with a flexible approach

- Configurable and customisable to reflect the end user's requirements and to the organisation's specifications and terminology.
- A security model to support different roles within the organisation.
- The support of both qualitative and quantitative modes to accelerate the risk management learning curve.

## ARM Features

- ▶ A fully web enabled real-time enterprise solution to support disparate users.
- ▶ 3 tier architecture where scalability is maximised and allowing integration with ERP and shared data environments.
- ▶ Real-time and bi-directional integration with Microsoft Project™, Artemis™, Primavera P3™ and Telelogic Doors™.
- ▶ Qualitative and quantitative inputs and outputs.
- ▶ Cost and schedule Monte Carlo risk analysis.
- ▶ Contingency planning and control.
- ▶ Knowledge base functionality making use of historical data.
- ▶ Provides a full risk management audit trail.
- ▶ Multiple and configurable impacts supporting internal and external variables.
- ▶ Ability to recognise and manage risk as an opportunity as well as a threat.
- ▶ Automatic Email and SMS notification when risk exposure limits are exceeded, changes made and new risks and actions are identified.
- ▶ Tracks risk management action process and effectiveness.
- ▶ Enterprise wide reporting off any level of the work or project break down structure.
- ▶ Hyperlinks from all text fields to any relevant business documentation, management plans, files or web sites.
- ▶ Filter and roll-up capability of all break down structures.
- ▶ Advanced security levels supporting common industry standards.
- ▶ Enables user defined filtering to focus on key areas of interest.
- ▶ Highly configurable maintenance functions to comply with your business process and to defining multiple user groups.
- ▶ Intuitive user friendly interface.
- ▶ Online help and customised tutorial tool.
